

Quality Policy

A core pillar in SIC's business behavior and a fundamental part of our DNA is a responsibility towards our employees, suppliers, and clients. SIC has implemented a management system focused on health, safety, environment, and quality to ensure we continuously improve the quality of our operations, solutions, and services to create value for our clients.

Quality is reflected in every aspect of SIC's operations and embedded deeply within the organization. We are committed to working towards zero defects in our projects, ensuring that our projects always meet the specific quality requirements. We want to work preventively, resulting in quality controls in all significant aspects of the Balance of Plant work.

To ensure quality, SIC does the following:

- Identify and evaluate potential quality risks to control and reduce these risks.
- Work in compliance with applicable legislation, regulations, and internal policies and procedures.
- All employees are provided relevant quality management training to ensure that the individual roles are aware of their responsibilities in implementing SIC's quality management policy and procedures.
- We deliver innovative, high-quality solutions to ensure continuous value for our clients. This includes developing and implementing best practices while providing customized solutions that meet our client's quality requirements.
- As our employees are considered our main asset, they are offered professional- and educational opportunities to allow for their continued development.
