

Stenger & Ibsen Construction – Environmental Policy

Stenger & Ibsen Construction is proud to contribute to the work with the energy transition in the world by delivering the Balance of Plant (BoP) within the renewable energy sector. Our ambition is to offer resource-efficient sustainable solutions within the limitations of the individual project's specifications. In each project, we strive to offer solutions that lower the impact on the environment. In many cases this is done in an early stage of a project by an adaptive design based on many years of experience and an open dialogue with our customers, subcontractors, suppliers, and other stakeholders.

As a company in the wind power industry, we have a responsibility to contribute to a sustainable development by:

- Having a responsible leadership that takes account of the environment
- Being open in the dialogue and being transparent to interested parties regarding our environmental work
- Integrating environmental responsibility into our core business and always try to improve
- Regularly offering customers to make environmental choices in the tender phase by suggesting options for design and the procurement of construction materials regarding its environmental impact and sustainability
- Working continuously with our subcontractors and suppliers to improve their environmental responsibility and performance
- Complying with applicable laws and regulations where our operations are ongoing
- Ensuring environmental consideration when we develop new services, processes, and products
- Not using prohibited or banned hazardous chemicals or materials and continuously trying to reduce the use of diesel fuel, explosives, and other fossil energy sources and to find alternative methods of construction that can contribute to limiting global warming
- Working preventively and as far as possible avoid the use of material and methods that may have a negative impact on the environment
- Minimizing the generated waste volumes by recycling used construction materials and implementing a solid waste handling process in our operations where a safe handling of hazardous waste and the sorting of waste into relevant fractions is crucial

This Environmental Policy applies to the entire Stenger & Ibsen Construction company and our subcontractors and suppliers. The Policy is based on our core values and the Code of Conduct and is a central part of our management system.
